Dr W. J. Reynolds.  
Selma. Ala.

My Dear Sir:-

Our Mr Welch will be in Selma in the course of a few weeks to erect the new organ in the Academy of music, and if your organ is in need of some adjustments, he may be able to help you out. As I said to you in previous letter, I would not advocate great amount of money spent in this direction as the organ is of that type of action which would never give continued satisfactory results even though large amounts were spent to renew parts or change system. Some work might be done however which would make things more endurable to organist and people alike, and we should be glad to help you out in this direction if you so desire.

Would your vestry think of talking either a complete rebuild on the electric system, or using the good pipe work of this organ in the construction of an entirely new instrument?

Yours Very Truly,

P.O.BOX #735
