

Norristown—The new four manual Moller organ was delivered to the Haws Avenue Methodist Episcopal Church in four truck loads. The weight of the shipment amounted to 19,160 pounds exclusive of the seven-horse power blower which weighs 1700 pounds. The organ is now in the course of construction. The organ is an entirely new instrument throughout excepting the pipes of the old organ. The organ is electro-pneumatic action. The organ will be dedicated on a Sunday late in October or early in November when an organ recital will be given during the week by Miss Catherine Morgan, the regular organist.
