

The *Reuter* Organ Company
Fine Pipe Organs Since 1917

Under the enthusiasm of new leadership, Reuter pipe organs continue to stir with the bold spirit of the 1980's.

Long on organ-building experience, they have injected new philosophies into company management while re-establishing the Reuter commitment to uncompromising workmanship that built, then kept Reuter a leader among quality pipe organs.

Effectiveness in actual use, be it recital or worship service playing, is the primary consideration for the plan and creation of an organ. All fine organs are custom designed for each individual situation. Whether the organ is large or small is dependent upon your requirements, available space and funds.

Let Reuter consult with you, for our judgment will be based upon total experience over many years.

Reuter consoles are built to harmonize with the surroundings in which they are placed and are available in a variety of styles and finishes. The organist is provided with instant and comfortable control of the entire instrument. Recent design changes have markedly improved the performance and reliability of the Reuter console. Standard provisions include a music rack, pedal keyboard with light, organist's bench adjustable in height, and a case of simple slab style or recessed rectangular design. Options are available for each specific situation.

Reuter

For many years Reuter has used an especially fine electro-pneumatic chest with pitman stop action free of performance failures. In many instances this chest will continue to be used, though Reuter provides also the pallet chest with slider stop action. There is no doubt that the mechanical linkage associated with these chests provides a fine feeling of intimate contact with the pipe. Reuter earnestly seeks the support of those interested in the "Tracker" action organ. It may provide the ideal action for the organ in your church.

While the basic philosophy underlying the tonal design of all Reuter organs is an adherence to classical principles, the validity and importance of other periods is recognized. Consult with us early in your planning to ensure competent engineering, good tonal design and superior finished voicing.

Your organ will be custom designed and engineered just for you. Reuter makes all of the pipes from selected, resonant woods and from metal alloys poured in its own foundry. Reuter makes all of its chests, both electro-pneumatic and mechanical pallet types, with a constant effort to reach perfection. Pipe valve pouches and pallet valve covers are made of the highest quality tanned leather. Only real, fine woods of premium grades are used throughout the organ interior, proudly displayed through a clear lacquer finish. Reuter possesses the facilities, personnel, ability and integrity to satisfy fully your requirements.

Each Reuter organ is an original creation to fulfill a specific requirement. A good tonal plan as envisioned in the stoplist is important, but it takes experience to translate it into musically useful sounds within the organ's environment. Reuter's staff is highly qualified to do that, both now and in the future. The staff of dedicated craftsmen, with varying lengths of individual service, collectively averages fifteen years with the Reuter Organ Company.

The Reuter organ is one of the truly distinguished organs built today. Were it possible to visit outstanding installations of instruments regardless of size, the Reuter organ consistently would be found.

Hear a Reuter organ. Discover the musical elegance that can be yours. Immediately an obviously satisfying quality of tone will impress you, which, despite changes that occur in the popular conception of organ design, will remain a pattern in future years.

Your choice of a Reuter will place you too in that discriminating group who find in the Reuter a uniquely different organ with qualities now being reflected in the work of other fine builders.
