

Magnificent console of Page DeLuxe Unit Organ installed in W-H-T, the broadcasting studio of The Radiophone Broadcasting Corporation, in the Wrigley Building, Chicago, Ill.

Broadcasting from W-H-T

Al Carney, well known organist in W-H-T, who daily thrills a vast radio audience with his masterful playing of the Page DeLuxe Unit Organ, recently installed in Station W-H-T, Wrigley Building, Chicago—and Pat Barnes, premier W-H-T announcer, in the combination of "Al and Pat", so enjoyable to listeners of the air—have made the W-H-T station universally popular all over the country.

Superior tonal qualities, instant responsiveness and master workmanship were the prime factors in the adoption of the Page Unit Organ by this powerful, well-known broadcasting station.

They wanted an organ suited beyond compare for the radio. Because of their size and standing, they wanted the largest organ used for direct broadcasting. They wanted the organ to be absolutely outstanding—more than an orchestral organ—a cathedral organ as well. And Page built that organ, fulfilling every wish and specification.

Four manuals, fifteen hundred pipes, a galaxy of traps and orchestral effects, all tied together by the famous Page Unit Relay System, and a beautifully carved console in rose and gold—these are the notable features of this Page masterpiece.
