THE SIPE-YARBROUGH ORGAN

The organ in its present state is a Moller of 1930, completely rebuilt, enlarged, and tonally altered to meet today's standards of organ design and construction. This work has been accomplished by the Sipe-Yarbrough Organ Company of Dallas, Texas, to meet specifications submitted by David L. Young of Morrilton.

All of the old Moller organ was incorporated into the new scheme, the pipes being completely revoiced and cleaned, the wind chests re-leathered and rebuilt. In addition, the organ was enlarged from ten to twenty-six sets of pipes to include reed work from Gieseke of Germany and flue work from Stinken of Holland. Two new blowers were provided by Meidinger of Switzerland, one installed in each organ chamber. A completely rebuilt three manual Austin Console was used to accommodate the enlarged scheme of the present organ, and has been finished to match the furniture in the new Church.

The organ, in its present stage of completion, contains 1548 speaking pipes with provisions for an exposed Postiv division of 366 pipes on two inch wind pressure to be added as funds are available, bringing the total number of speaking pipes to 1914. Primarily designed for use in the Worship Services of the Church, this instrument is also adequate for concert performance of all periods of organ composition from sixteenth century to present.
